Scope & Sequence: Chair's Guide

NWA Mathematics 2026–27

The idea. Every proficiency lives in one Google Sheet. Teachers edit it through the *Workshop* (a web page tied to the Sheet). When you click **Publish**, the public site updates; parents, deans, admissions and students only ever see published versions.

	What it is	Who touches it
Google Sheet	The master copy: proficiencies, threads, cell descriptions, overlaps, resources, change log	You only. Share it view-only: Sheet editors can also edit the script
Workshop	The site plus edit buttons; every edit saved to the Sheet with the teacher's name	Teachers on the *editors* row of the Sheet's Config tab (add or remove names there)
Public site	ryankcampbell.github.io/nwa-math-proficiencies — read-only, works offline, Excel download, practice links	Everyone

Set up once (about 15 minutes)

1. **Connect the script.** Re-run `clasp login` and tick *every* box (or paste the three files into **Extensions** → **Apps Script**). Claude deploys it and hands you the Workshop URL.
2. **Open the Workshop URL.** At "Google hasn't verified this app" click **Advanced** → **Go to…** → **Allow**. The empty Sheet fills itself with the draft.
3. **GitHub token.** github.com → Settings → Developer settings → Fine-grained tokens: only this repo, *Contents: read and write*. Paste via **NWA Math** → **Set GitHub token**. Calendar the expiry date.
4. **Test.** Change one word, **Publish**, check the site a minute later.

The year with the department

Oct 21 meeting (30 min)
Paper first: printed proficiencies, rotating partners find common threads. Then project the draft's **Scope & Sequence** page and compare. Send the Workshop link.

Round 1, two weeks: Sort
Each teacher owns their course: move proficiencies to the right thread, fix wording, write their column's cell descriptions.

Round 2, two weeks: Cross-check
Neighbor pairs (6–7, 8–IM1, IM2–IM3, IM3–PC/APC, APC–Calc) work the **Review** page: mark each overlap *Spiral*, *Redundant* or *Not the same*.

November meeting
Settle the leftover disagreements and the 8 open questions. Publish v1; download the Excel for administration.

Spring
At least one resource per proficiency; problem bank (below).

May–June
Teachers make summer links or class codes (demo: `NWA26`). Codes go live within a minute; they are saved in the Sheet's *Plans* tab. Each spring: one revision round.

Your weekly ten minutes

- Skim the Sheet's *Changelog* tab: who changed what.
- Open **Review**: which overlaps and questions are still undecided?
- **Publish** when the state is good. Every version is kept in GitHub history, so nothing is lost.

How resources get provisioned

Now: any teacher clicks **Add resource** on a proficiency and pastes a link (Khan, Desmos, a video) or uploads a file. Uploads go to a Drive folder; **Publish** copies them into the site so links never break. Until a proficiency has resources, students see a Khan Academy search link.

The practice bank (5 demo sets live: PA3-19, IM1-10, IM2-02, IM3-05, IM3-48). Same engine as the Astronomy site's study sets: one file per proficiency (`IM3-14`) with self-check questions, worked explanations, new numbers each try, figures drawn from the numbers, and **interactive answers** (place a point, drag a curve, set a slider, mark a region, embedded Desmos), progress kept on the student's device.

1. Teachers send you old exams, quizzes (with keys), worksheets and favorite links. Save them in `deptchair/curriculum_map/resources/`, links in its `resources.md`. That folder is private; it is never published.
2. Ask Claude to mine the folder. It tags every exam question to proficiency codes and writes a *coverage report*: which proficiencies are tested, how often, and which never are.
3. Claude writes 4–8 *new* parallel problems per proficiency in the style of those exams.
4. The course's teacher approves or edits them in the Workshop; **Publish**.

Rules. Exam questions are never published, only new problems modeled on them (students will see the site). Codes like `IM3-14` are permanent: **Retire**, never renumber, or old practice links break. The `.tex` file is no longer the source; the Sheet is. The draft is public at the URL above.
