Scope & Sequence Workshop: Facilitator's Guide

NWA Mathematics 2026–27

How it fits together. Teachers edit in the **Workshop**; every change lands in the **Google Sheet** (the draft) with their name. Nothing public changes until you click **publish to public site**. Then the **public site** (parents, deans, admission, students, Excel download, practice links) updates in a minute. Every published version is kept on GitHub.

Workshop: script.google.com/a/macros/nwacademy.org/s/AKfycbzJ. . . /exec (bookmark it) **Teacher list:** Sheet → *Config* → *editors*

Before Oct 21

- Email the six teachers the Workshop link and the teacher's guide. Ask each to open it once (catches sign-in trouble early).
- Print each course's proficiency list for the paper activity (public site → a course → print).
- Sheet → **Share**: teachers *Viewer* or not listed (Sheet editors could change the script).

Oct 21 meeting run sheet (30 min)

0:00 **Why.** Admin wants a scope & sequence: themes across courses, one tab per area. Ours also lives online, permanently, and feeds summer practice.

0:03 **Paper first.** Pairs with printed lists rotate every 3 min, naming threads that run through both courses. Collect them on the board.

0:13 **Compare to the draft.** Project **Scope & Sequence**; walk two strands. Where the board and the draft disagree, write it down; that is Round 1's work.

0:20 **Demo.** Home page, type `NWA26`; open a practice set, try the slider. Then the Workshop: move one proficiency, write one cell.

0:26 **Assign the rounds** (below) and the dates.

Round 1: Sort (2 weeks)

Each teacher owns their course: thread for every proficiency, wording, retire or add, and their column's cell in every row. Strand stewards (optional) read one strand top to bottom for flow.

Round 2: Cross-check (2 weeks)

Neighbor pairs work the **Review** page together: 6–7, 8–IM1, IM2–IM3, IM3–PC/APC, APC–Calc. Each overlap: *Spiral*, *Redundant* or *Not the same*. Disagreements become questions.

Your weekly 10 minutes

1. Sheet → *Changelog*: who has started, what changed.
2. Workshop → **Review**: undecided overlaps and open questions. Nudge stragglers.
3. **publish to public site** when the draft is in good shape (weekly is fine).

November meeting

1. **Review**, filter *Undecided*: settle what's left, decide each open question.
2. Scan each strand tab for empty cells or "n/a" that should not be.
3. Publish v1. Public site → **Download Excel** (one tab per strand) for administration.

Spring and summer

Resources: aim for one per proficiency. Teachers add links in the Workshop or send you files; save them in `deptchair/curriculum_map/resources/` (private; links in `resources.md`). **Practice bank:** ask Claude to mine that folder: it tags exam questions to codes, reports coverage gaps, and writes *new* problems (5 demo sets live now). Course teachers approve before publishing. **May–June:** teachers make summer links and class codes. **Each spring:** one revision round, same steps.

Upkeep

- **Add or remove a teacher:** Config → editors (comma-separated; usernames are fine).
- **Remove a resource:** delete its row in the *Resources* tab, then publish.
- **Edit collisions:** the later save wins; the Changelog keeps every version to copy back.
- **GitHub token expires:** GitHub emails you. Make a new one (Contents read/write, this repo only) and paste it via **NWA Math → Set GitHub token**.
- **Health check:** add `?check=1` to the Workshop link.
- **Code changes:** Claude updates the Workshop at the same link (needs `clasp login`).

Rules. Codes like `IM3-14` are permanent: retire, never renumber, or old practice links break. The Sheet is the source now, not the `.tex`. Never publish exam items or answer keys; uploads become public. No student names in practice titles or notes.
